Income Taxation and State Capacities in Chile: Measuring Institutional Development Using Historical Earthquake Data

Hector Bahamonde • Postdoctoral Fellow • Tulane University

January 2, 2018

Overview

[Origins] Most theories emphasize how important fiscal capacities are for state-building. However, most theories don't explain where these capacities come from.

[Measurement] Most theories provide **historical** explanations for state-building, and yet, these theories lack of **historical** measurements able to capture levels of state formation over time.

Overview

[Origins] Most theories emphasize how important fiscal capacities are for state-building. However, most theories don't explain where these capacities come from.

[Measurement] Most theories provide **historical** explanations for state-building, and yet, these theories lack of **historical** measurements able to capture levels of state formation over time.

- I find that these gaps represent important **theoretical** and **empirical deficits**.

Taxation and State Capacities

Convince you:

1. Higher levels of sectoral/elite competition promoted the implementation of the income tax.

Taxation and State Capacities

Convince you:

1. Higher levels of sectoral/elite competition promoted the implementation of the income tax.
2. The income tax fostered higher levels of state capacities overtime.

Taxation and State Capacities

Convince you:

1. Higher levels of sectoral/elite competition promoted the implementation of the income tax.
2. The income tax fostered higher levels of state capacities overtime.
3. Earthquake death-tolls are good proxies to measure of state capacities.

Taxation and State Capacities

Convince you:

1. Higher levels of sectoral/elite competition promoted the implementation of the income tax.
2. The income tax fostered higher levels of state capacities overtime.
3. Earthquake death-tolls are good proxies to measure of state capacities.The **capacity** of the state to **enforce** quake-sensitive **building codes** throughout the territory, is a **reflection** of its **overall** state-capacities.

Earthquake and States Capacities

2010 Haiti: 7M, 100,000 casualties

Government Palace

2010 Chile: 8.8M, 525 casualties

One of the **few** buildings that actually collapsed

Earthquake and States Capacities

2010 Haiti: 7M, 100,000 casualties

Government Palace

2010 Chile: 8.8M, 525 casualties

One of the **few** buildings that actually collapsed

Why did a weaker earthquake flatten Haiti?

Earthquake and States Capacities

2010 Haiti: 7M, 100,000 casualties

Government Palace

2010 Chile: 8.8M, 525 casualties

One of the **few** buildings that actually collapsed

Why did a weaker earthquake flatten Haiti? **Intuition**: Chile has better "state capacities" compared to Haiti.

The Importance of Building Codes

There exists both a **scientific** and a **popular** consensus on that **building codes** *do* reduce death tolls. **Death tolls** are mostly a function of state-capacities.

The Importance of Building Codes

There exists both a **scientific** and a **popular** consensus on that **building codes** *do* reduce death tolls. **Death tolls** are a function of state-capacities, only.

Dual Political Economy

- *Dual economy* literature (*a.k.a* "Lewis model").

Dual Political Economy

- *Dual economy* literature (*a.k.a* "Lewis model"). Industrialists and agriculturalists are in permanent **conflict** regarding the **transference of labor** between sectors.

Dual Political Economy

- *Dual economy* literature (*a.k.a* "Lewis model"). Industrialists and agriculturalists are in permanent **conflict** regarding the **transference of labor** between sectors. Being labor a **factor of production**, the ultimate conflict is over **sectoral expansion**:

Dual Political Economy

- *Dual economy* literature (*a.k.a* "Lewis model"). Industrialists and agriculturalists are in permanent **conflict** regarding the **transference of labor** between sectors. Being labor a **factor of production**, the ultimate conflict is over **sectoral expansion**:
  1. More agricultural efficiency, less dependence labor. Industrial expansion absorbs the excess of redundant laborers.

Dual Political Economy

- *Dual economy* literature (*a.k.a* "Lewis model"). Industrialists and agriculturalists are in permanent **conflict** regarding the **transference of labor** between sectors. Being labor a **factor of production**, the ultimate conflict is over **sectoral expansion**:
  1. More agricultural efficiency, less dependence labor. Industrial expansion absorbs the excess of redundant laborers.
  2. Due to the fixity of land, landowners can't expand at the same pace industrialists can (mainly depend on capital).

Dual Political Economy

- *Dual economy* literature (*a.k.a* "Lewis model"). Industrialists and agriculturalists are in permanent **conflict** regarding the **transference of labor** between sectors. Being labor a **factor of production**, the ultimate conflict is over **sectoral expansion**:
  1. More agricultural efficiency, less dependence labor. Industrial expansion absorbs the excess of redundant laborers.
  2. Due to the fixity of land, landowners can't expand at the same pace industrialists can (mainly depend on capital).
- Hence, agricultural expansion is a self-undermining process (relative to industrial expansion), and *cultivates the seeds of its own demise*.
- I **extrapolate this conflict to politics**.

Dual Political Economy

- *Dual economy* literature (*a.k.a* "Lewis model"). Industrialists and agriculturalists are in permanent **conflict** regarding the **transference of labor** between sectors. Being labor a **factor of production**, the ultimate conflict is over **sectoral expansion**:
  1. More agricultural efficiency, less dependence labor. Industrial expansion absorbs the excess of redundant laborers.
  2. Due to the fixity of land, landowners can't expand at the same pace industrialists can (mainly depend on capital).
- Hence, agricultural expansion is a self-undermining process (relative to industrial expansion), and *cultivates the seeds of its own demise*.
- I **extrapolate this conflict to politics**. **Particularly, to their respective sectoral preferences towards income taxation**—and consequently—**state centralization**.

Dual Economy and Sectoral Conflicts

- Since taxation affects landowners and industrialists in different ways, both sectors have different preferences towards state centralization.

Dual Economy and Sectoral Conflicts

- Since taxation affects landowners and industrialists in different ways, both sectors have different preferences towards state centralization.

  [Agr] Since land fixity increases the risk premium of the landed elite's main asset, they systematically resist taxation.

Dual Economy and Sectoral Conflicts

- Since taxation affects landowners and industrialists in different ways, both sectors have different preferences towards state centralization.

[Agr] Since land fixity increases the risk premium of the landed elite's main asset, they systematically resist taxation.

[Ind] As capital can be reinvested in nontaxable sectors, industrialists' preferences toward taxation are more elastic.

Income Taxation and State Capacities

Fiscal sociology theory. Income taxation offers a theory of state formation.

Income Taxation and State Capacities

Fiscal sociology theory. Income taxation offers a theory of state formation.

Monitoring private incomes, and converting them into public property, *fostered* state formation.

Income Taxation and State Capacities

Fiscal sociology theory. Income taxation offers a theory of state formation.

Monitoring private incomes, and converting them into public property, *fostered* state formation.

1. *Indirect* taxes are **easier** to collect: ex., collect them at ports. appendix
2. *Direct* taxes (ex., income taxes) are **harder** to collect: required the state sending tax collectors to the entire territory, increasing state presence.

Income Taxation and State Capacities

Fiscal sociology theory. Income taxation offers a theory of state formation.

Monitoring private incomes, and converting them into public property, *fostered* state formation.

1. *Indirect* taxes are **easier** to collect: ex., collect them at ports. appendix
2. *Direct* taxes (ex., income taxes) are **harder** to collect: required the state sending tax collectors to the entire territory, increasing state presence.

- Income taxation generated positive **spillover effects** for state-making, rising **economies of scale** of the **operational efficiencies** of the bureaucracy.

Income Taxation and State Capacities

Fiscal sociology theory. Income taxation offers a theory of state formation.

Monitoring private incomes, and converting them into public property, *fostered* state formation.

1. *Indirect* taxes are **easier** to collect: ex., collect them at ports. appendix
2. *Direct* taxes (ex., income taxes) are **harder** to collect: required the state sending tax collectors to the entire territory, increasing state presence.

- Income taxation generated positive **spillover effects** for state-making, rising **economies of scale** of the **operational efficiencies** of the bureaucracy.

In simple, the same bureaucracies that were sent to collect taxes, used the acquired knowledge and capacity to perform other state tasks (justice dispensation, security provision, etc.)

Case Study Findings

- As industrialists depended more on infrastructure implemented at the local level (roads, railroads and bridges), they preferred to shoulder a higher tax burden through progressive direct taxation.
  - Industrialists preferred to impose an income tax on themselves.

Case Study Findings

- As industrialists depended more on infrastructure implemented at the local level (roads, railroads and bridges), they preferred to shoulder a higher tax burden through progressive direct taxation.
  - Industrialists preferred to impose an income tax on themselves. **Given their higher dependence on imports (capital), imposing an import tax would have made them worse off**.

Case Study Findings

- As industrialists depended more on infrastructure implemented at the local level (roads, railroads and bridges), they preferred to shoulder a higher tax burden through progressive direct taxation.
  - Industrialists preferred to impose an income tax on themselves. **Given their higher dependence on imports (capital), imposing an import tax would have made them worse off**.

Other paper In the early 20th century in L.A., the **emergence of industrial challenger elites** fostered the **earlier** implementation of the income tax. Models.

Did the implementation of the income tax increase state capacities over time?
If so, how those can be measured?

Income Taxation and State Capacities in Chile: Measuring Institutional Development Using Historical Earthquake Data

Research Question

What have been the **effects** of fiscal expansion on state capacities overtime, and how can they be **measured**?

Research Question

What have been the **effects** of fiscal expansion on state capacities overtime, and how can they be **measured**?

Use a novel hand-collected longitudinal **dataset on earthquakes death tolls** to proxy the *capacity* of the state to enforce building codes at the subnational level.

Research Question

What have been the **effects** of fiscal expansion on state capacities overtime, and how can they be **measured**?

Use a novel hand-collected longitudinal **dataset on earthquakes death tolls** to proxy the *capacity* of the state to enforce building codes at the subnational level. **State capacities increase overtime upon the implementation of the income tax**.

The first section helps us to understand *when* countries implement the income tax, and *why* timing is relevant.

The first section helps us to understand *when* countries implement the income tax, and *why* timing is relevant. However, the first section doesn't link income taxation with *actual* state capacities.

The first section helps us to understand *when* countries implement the income tax, and *why* timing is relevant. However, the first section doesn't link income taxation with *actual* state capacities.

Mechanism Beyond '*War makes states and states make war.*' Domestic-based mechanism.

Measurement *How* can we **measure** the effects of income taxation on state of capacities overtime?

The first section helps us to understand *when* countries implement the income tax, and *why* timing is relevant. However, the first section doesn't link income taxation with *actual* state capacities.

Mechanism Beyond '*War makes states and states make war.*' Domestic-based mechanism.

Measurement *How* can we **measure** the effects of income taxation on state of capacities overtime?

⋆ **Historians** and **fiscal sociologists** provide some answers, but the **sectoral approach** on the relationship between **income taxation** and **state capacities** has been overlooked in the Latin American context.

The first section helps us to understand *when* countries implement the income tax, and *why* timing is relevant. However, the first section doesn't link income taxation with *actual* state capacities.

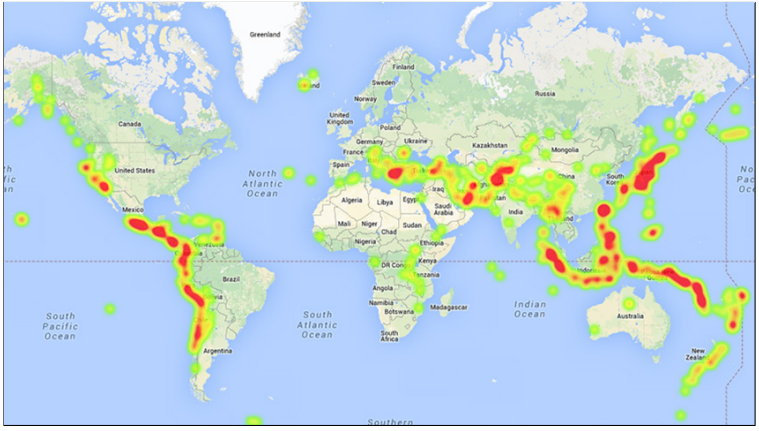
Mechanism Beyond '*War makes states and states make war.*' Domestic-based mechanism.

Measurement *How* can we **measure** the effects of income taxation on state of capacities overtime?

- ⋆ **Historians** and **fiscal sociologists** provide some answers, but the **sectoral approach** on the relationship between **income taxation** and **state capacities** has been overlooked in the Latin American context.
- ⋆ Most **theories** of state-building in comparative politics are historical. Yet, most **measurements** capture *contemporaneous* levels of state-capacities. Earthquake death tolls.

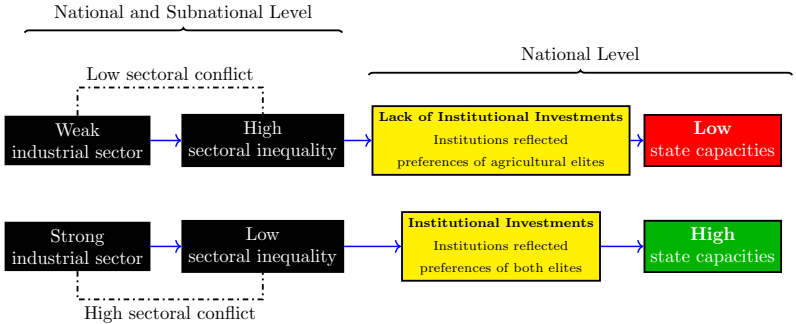
Why Earthquakes?

Earthquakes are **exogenous** to regime type, levels of political/economic development, and other sources of variation.



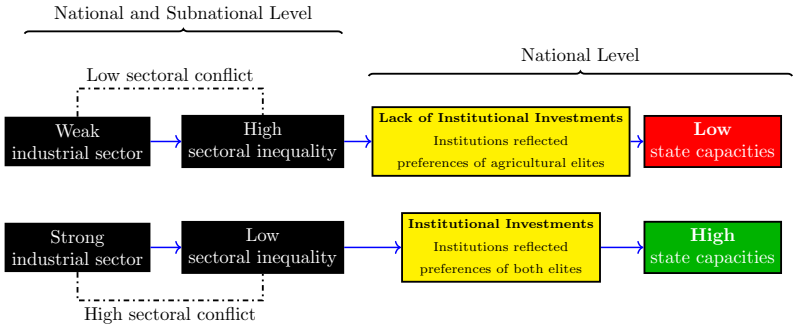
Thinking Subnationally

Since death tolls are a function of how well/bad building codes are enforced by the state throughout the **territory**, adopting a **subnational** approach seems more appropriate.



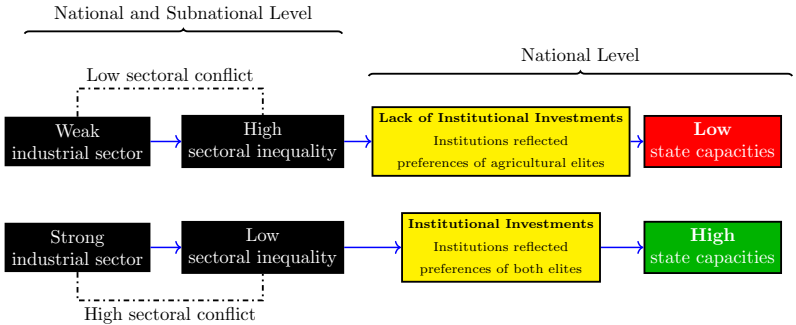
Argument

Argue that higher levels of subnational and national sectoral contestation fostered state-capacities overtime.



Argument

Conceptualizing contestation: **regional industrial expansion** contesting **agricultural national** economic hegemony.



Incorporation of Subnational Elites into the National State-Making Project

Subnational/National Connection

Higher levels of subnational industrial expansion posed credible threats to the landed elites at the national level.

Incorporation of Subnational Elites into the National State-Making Project

Subnational/National Connection

Higher levels of subnational industrial expansion posed credible threats to the landed elites at the national level. Agreements were required to avoid military conflicts

Incorporation of Subnational Elites into the National State-Making Project

Subnational/National Connection

Higher levels of subnational industrial expansion posed credible threats to the landed elites at the national level. Agreements were required to avoid military conflicts. Contingent on the delivery of subnational public goods, local elites agreed to cooperate with the central level, and comply with the **income tax**.

Argument

Increasing the density of state presence overtime

The implementation of the income tax improved state-capacities over time.

Argument

Increasing the density of state presence overtime

The implementation of the income tax improved state-capacities over time. Activities such as **deployment** of tax collectors to inspect accounting books and to supervise monetary transfers between individuals increased the density of state presence overtime.

The Theory Should Pass Two Tests

1. The state should have higher capacities (i.e. *lower death tolls*) when subnationally contested.
2. Implementation of the income tax should produce higher state-capacities (i.e. *lower death tolls*) overtime.

Analyses

Data Subnational and national Chilean data (1907 to 2012).

- **National** Sectoral outputs. Just like before
- **Subnational** NOAA database as a starting point.

Estimating Effects of Income Taxation on Death Tolls Overtime

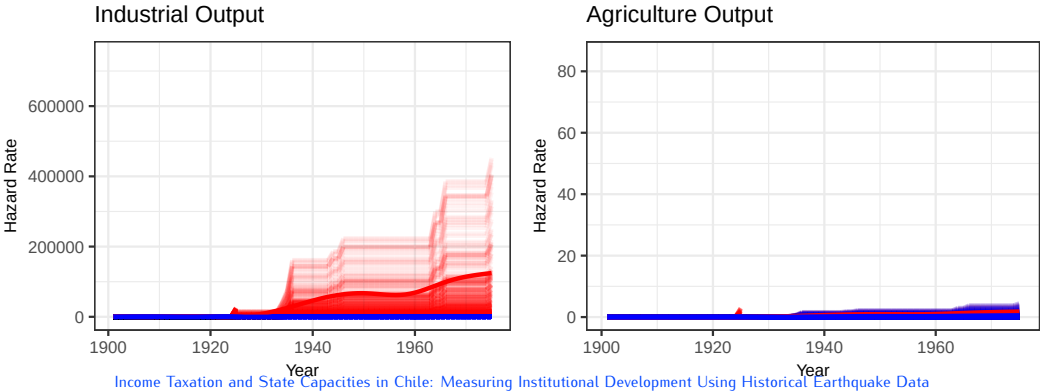
Summary

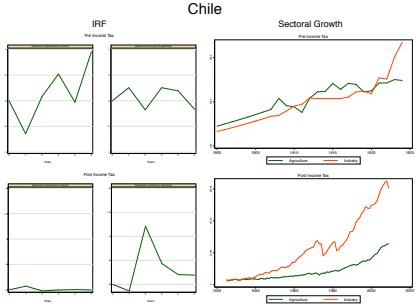
Income Tax Adoption

The emergence of the industrial sector *accelerated the implementation of the income tax*. The tax was not important for the new revenue it collected, but because it forced inter-elite compromises that were beneficial for sate-*making*.



Balanced Growth and Income Tax

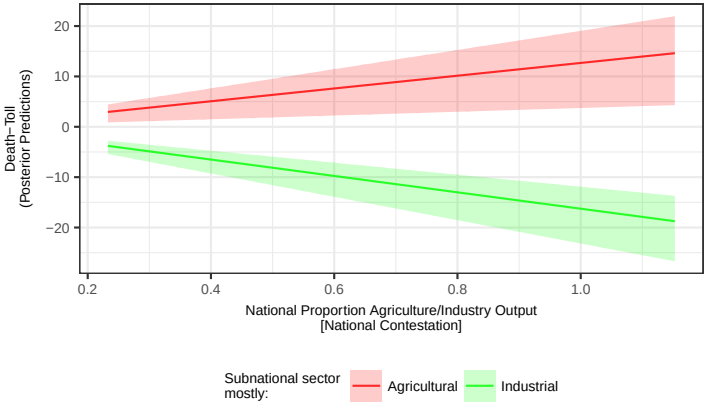
When the income tax was implemented under *contested* scenarios,[1] elite incorporation changed the institutional order, fostering long-term economic growth.



[1] When sectoral cleavage was *strong*, i.e. (1) cointegration and (2) reversal / Granger tests.

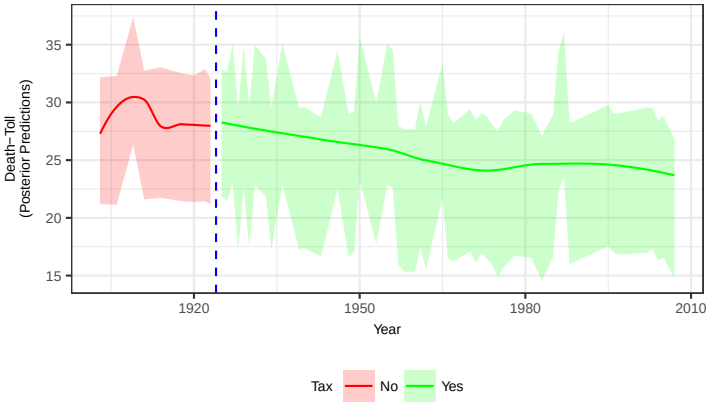
Earthquakes, Income Tax and State Capacities

Subnational sources of sectoral contestation increased state-capacities.



Earthquakes, Income Tax and State Capacities

The implementation of the income tax was a state-*making* institution, increasing state-capacities overtime.



What's Ahead

- I will collect more earthquake data for more countries.
- I will add more historical evidence, and try to see what's beyond the Chilean case.
- Others.

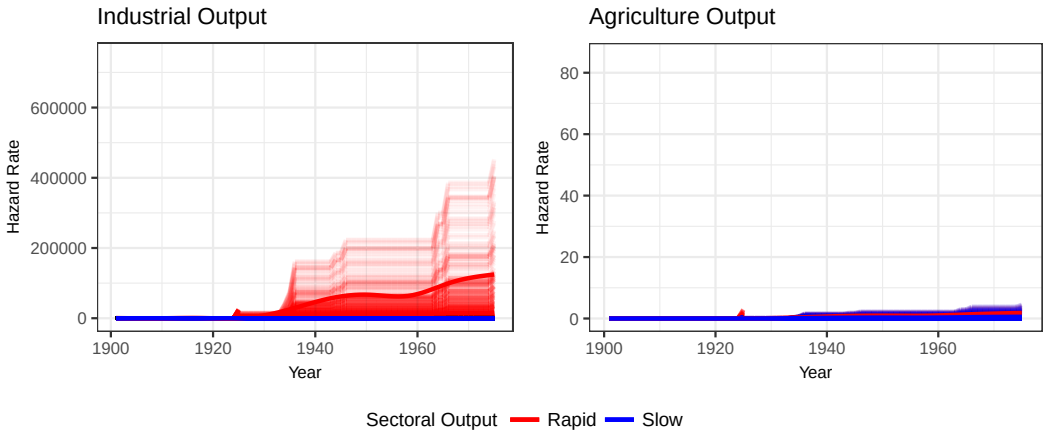
Simulated sectoral hazard rates of implementing the income tax law.
HR: probability that a case will fail at time t.



Why Not *In*direct Taxation

Indirect taxes (like import taxes) require less **state efforts** to capture revenue.

Staffing an office, **waiting** for the ships to come in and **count** the goods. **Sacks of wheat**, for ex.

Talcahuano Port, Chile 19th Century.

```

Sectoral Competition and Taxation?

Agricultural production, as it needs mostly land, it does not rely on capital as much as the industrial sector does. Moreover, they oppose taxation because their main asset (land) is fixed, hence landowners not being able to move their asset, resist taxation. On the contrary, industrial elites rely on public goods that are beneficial for their business (railroads, bridges, etc.). And while industrialists would prefer imposing higher import taxes (NOT the income tax), that increases the price of importing industrial capital (for ex., machines). Consequently, their second best choice is imposing an income tax.
For these reasons, the emergence of the industrial sector (which implies higher levels of sectoral/elite contestation) leads to the implementation of the income tax.

Where does industry come from?

p. 20 of dissertation. Industry, as predicted by the dual sector model, came from agriculture:

- After the mining boom, mining elites shifted their focus to what is considered the first *true* industrial work which began under agricultural auspices: the cotton mills: "[t]he first power looms were brought [in Perú, Ecuador, and Venezuela] in the 1840s, 1850s; but in all three they were a failure, some of the early mills in Ecuador being destroyed by an earthquake. It was not until after 1890 that the textile industries of these nations began to operate with reasonable success. Guatemala's first cotton mill was established in 1882, and between that date and 1910 a few mills appeared in Chile, Argentina, Uruguay, and Colombia."
- The first industries were called *obrajes* and beyond textiles, early industrialists processed other agricultural goods. For example, animal grease and tallow, dried and cured meats, flour, bread, beer, wines and spirits, being most of them for domestic consumption. Sugar was used in the production of chocolate, candies and biscuits.
- The industrial sector was boosted by favorable international conditions, many times stimulating a positive complementarity between the two sectors. Industrial activities started very small, progressing "from the shop to the factory during the latter half of the nineteenth century."
- Importantly, modern industrialization did *not* begin with ISI, but around 1900. Others find that the "fact that manufacturing was alive and thriving in Latin America before the 1929 crash is now beyond question." And that the "development of large-scale, mechanized (and even "heavy") industry can be dated back to the 1890s." By the 1870's the carriage industry was on a firm basis.

But Where Does Industrialization Come From?!

The theory puts heavy emphasis on the role of industrialization on state development. However, *Where does industrialization come from?*
Haber 2005 explains that:
"The impetus for industrial development came from the expansion of foreign trade. Driving the growth of foreign trade were two factors. The first was that most Latin American countries were on the silver standard, and silver fell in value relative to gold in the last two decades of the nineteenth century. Most Latin American countries therefore saw their currencies depreciate in real terms relative to the gold-backed currencies of the economies of the North Atlantic. As international trade theory would predict, real exchange rate depreciation resulted in the expansion of the tradables (e.g. industrial goods) [...] Second, the late nineteenth century also saw a dramatic decline in the international costs of transport, as steel-hulled steamships came to replace wood and sail."

From Conflict to Cooperation

Why do lower levels of **sectoral inequality** (which implied **higher military threats**) lead to **sectoral cooperation**?
The rising of the industrial sector allowed industrial political elites to get access to military capacities that were as good as the agricultural elite's. The **threat** is what leads to **cooperation** rather than **conflict**. It makes no sense to engage in conflict when (1) both groups have the same 'fire power' and (2) when there is a cheaper exit (sectoral bargains).

War was in 1891, but Income Tax in 1924?

- Civil wars of **1851-859** and **1891** between a "**large landed property [elite against a] productive capital [elite].**"
- President **Balmaceda's overthrowing in 1891** explains the sectoral nature of these conflicts.
- He was mainly supported by the landed elites, but later overthrown in 1891 by a mainly industrial/mining coalition:
  - His agenda on "industrial" infrastructure benefited mostly agricultural areas.
  - his attitude towards the banking sector (closely linked to the mining sector) confiscatory.
- At the same time, however, he failed to secure a coalition with his own sector.
  - Decline of wheat exports. Balmaceda's policies fostered sectoral dependence of agriculture on industrial production, forcing the "landed proprietors [to] become dependent to a considerable extent on the continuing prosperity of the major nitrate capitalists." (Zeitlin).
  - While it would be inaccurate to say that Balmaceda was *completely* supported by agriculturalists and *completely* opposed by industrialists, this example illustrates how (failed) inter-sectoral alliances and biased public goods provision against industrialists led these two groups to a military conflict in 1891.
  - The conflict left a permanent scar in the Chilean society. While the civil war lasted only nine months, it took 10,000 lives (out of a total population of 3 million people) and cost more than $ 100 million,a significant amount for a small country.
  - There was an intention to avoid more violence. For instance, while all "ministers, counselors of state, members of the constituent congress [,] municipal officials, provincial governors and intendants, members of the judiciary and even the lowest functionaries and ordinary employees of Balmaceda's government were investigated [or] brought to trial," there were a number of amnesties issued. Similarly, there were a number of *aborted* coups in 1907, 1912, 1915 and 1919. I identify a third additional factor. War was more likely to exhaust all existent assets without producing positive outcomes for either sector, putting pressures for a sectoral compromise.

Latitude	0.06	0.01	0.04	0.08	1.00
Longitude	-0.49	0.07	-0.58	-0.39	1.00
Population	-0.02	0.00	-0.02	-0.02	1.00
Urban	-5.22	0.73	-6.19	-4.35	1.00

Note: 200000 iterations with a burn-in period of n = 5000 iterations discarded.

80% credible intervals (upper/lower bounds). All R-Hat statistics below critical levels.

Standard convergence diagnostics suggest good mixing and convergence.

Year fixed effects were omitted in the table.

A total of 4 chains were run. Detailed diagnostic plots available here.

For example, the historian Barros (1970) explains that before the civil war, *salitreras* (nitrate towns) in northern Chile were locally so important that they were considered "a state within the state." **Local bosses had to approve decisions on whether public employees could be fired, whether public works could be developed, and on whether politicians could give public speeches**. Moreover, they coined their own currency and had their own particular local laws.

Thank you!
