

Income Taxation and State Capacity in Chile: Measuring Institutional Development Using Historical Earthquake Data

Hector Bahamonde • Assistant Professor • Universidad de O'Higgins

May 14, 2019

Theory

- Scholarly work has explored the positive influence of direct taxation on state development.
- Unfortunately:
 1. Most accounts focus on European cases.

Theory

- Scholarly work has explored the positive influence of direct taxation on state development.
- Unfortunately:
 1. Most accounts focus on European cases.
 2. The role of structural economic transformations has been overlooked.

Measurement

- Most state formation theories put their emphasis on pre-colonial, early, or independent Latin America.
- Unfortunately:
 1. These theories lack of a measurement able to capture levels of state capacity *overtime*.

Taxation and State Capacity in Chile

Convince you:

1. Higher levels of sectoral competition promoted the implementation of the income tax.

Taxation and State Capacity in Chile

Convince you:

1. Higher levels of sectoral competition promoted the implementation of the income tax.
2. The income tax fostered higher levels of state consolidation overtime.

Taxation and State Capacity in Chile

Convince you:

1. Higher levels of sectoral competition promoted the implementation of the income tax.
2. The income tax fostered higher levels of state consolidation overtime.
3. Earthquake death-tolls are good-enough proxies to measure state capacity overtime.

Why Earthquakes?

The **capacity** of the state to **enforce** quake-sensitive **building codes** throughout the territory, is a **reflection** of its **overall state-capacity**.

Why Earthquakes?

Earthquakes are **exogenous** to regime type and levels of political/economic development.

Income Taxation and State Capacity in Chile: Measuring Institutional Development Using Historical Earthquake Data

Earthquakes and States Capacity

2010 Haiti: 7M, 100,000 casualties

Government Palace

2010 Chile: 8.8M, 525 casualties

Earthquakes and States Capacity

2010 Haiti: 7M, 100,000 casualties

Government Palace

2010 Chile: 8.8M, 525 casualties

Intuition: Chile has higher levels of “state capacity.”

The Importance of Building Codes

There exists a **popular** consensus on that **building codes** *do* reduce death tolls.

El terremoto revela falta de rigor en la aplicación de normas de construcción en Ciudad de México

Dual Political Economy and Taxation

- “*Lewis model:*” Industrialists and agriculturalists are in permanent **conflict**.

Dual Political Economy and Taxation

- “Lewis model:” Industrialists and agriculturalists are in permanent **conflict**. I extrapolate this conflict to politics:

Dual Political Economy and Taxation

- “*Lewis model:*” Industrialists and agriculturalists are in permanent **conflict**. I extrapolate this conflict to politics:
There are different **sectoral preferences towards income taxation**, and consequently, **state centralization**

Dual Political Economy and Taxation

- “Lewis model:” Industrialists and agriculturalists are in permanent **conflict**. I extrapolate this conflict to politics:

There are different **sectoral preferences towards income taxation**, and consequently, **state centralization**:

[Agr] Since **land fixity** increases the risk of the landed elite's main asset, landowners systematically **resist** taxation.

Dual Political Economy and Taxation

- “Lewis model:” Industrialists and agriculturalists are in permanent **conflict**. I extrapolate this conflict to politics:

There are different **sectoral preferences towards income taxation**, and consequently, **state centralization**:

[Agr] Since **land fixity** increases the risk of the landed elite's main asset, landowners systematically **resist** taxation.

[Ind] As capital can be **reinvested in nontaxable sectors**, industrialists' preferences toward taxation are more **elastic**.

The Spillover Effects of Taxation on State Capacity

- *"Fiscal sociology:"* Income taxation offers a theory of state formation.

The Spillover Effects of Taxation on State Capacity

- *"Fiscal sociology:"* Income taxation offers a theory of state formation.
- Monitoring private incomes, and converting them into **public property**, *fosters* state development:

The Spillover Effects of Taxation on State Capacity

- *"Fiscal sociology:"* Income taxation offers a theory of state formation.
- Monitoring private incomes, and converting them into **public property**, *fosters* state development:
 - **"Learning-By-Doing"**: If states really want to **tax** its population, they *will* develop—**endogenously**—the **capacity** to do it.

The Spillover Effects of Taxation on State Capacity

- “*Fiscal sociology*:” Income taxation offers a theory of state formation.
- Monitoring private incomes, and converting them into **public property**, *fosters* state development:
 - “**Learning-By-Doing**”: If states really want to **tax** its population, they *will* develop—**endogenously**—the **capacity** to do it.
 - “**Spillover Effects**”: Income taxation generated positive **spillover effects** for state-making, rising **economies of scale** of the **operational efficiencies** of the bureaucracy:

The Spillover Effects of Taxation on State Capacity

- “*Fiscal sociology*:” Income taxation offers a theory of state formation.
- Monitoring private incomes, and converting them into **public property**, *fosters* state development:
 - “**Learning-By-Doing**”: If states really want to **tax** its population, they *will* develop—**endogenously**—the **capacity** to do it.
 - “**Spillover Effects**”: Income taxation generated positive **spillover effects** for state-making, rising **economies of scale** of the **operational efficiencies** of the bureaucracy:
 - Income taxation represented the **first layer of state-complexity**.
 - **Additional layers** (bureaucracies) was cheaper at the margin.

Argument (I)

The emergence of a **strong industrial class**, accelerated the **implementation of the income tax**.

Argument (II)

The emergence of a strong industrial class, accelerated the implementation of the **income tax**. In turn, income taxation fostered **state-capacity** overtime.

Chilean Shadow Case

- Industrial elites were **better off** paying the income tax rather than **imposing higher tariffs**

Chilean Shadow Case

- Industrial elites were **better off** paying the income tax rather than **imposing higher tariffs**—industrial class was highly *dependent on imported capital*.

Chilean Shadow Case

- Industrial elites were **better off** paying the income tax rather than **imposing higher tariffs**—industrial class was highly *dependent on imported capital*.
- In exchange of being income taxed, industrialists demanded public goods delivered at the local level (bridges and ports).

The Theory Should Pass The Following Test

Implementation of the **income tax** should foster *higher state-capacity*.
[lower death tolls overtime] Temp. Distribution of EQs

Geographic Distribution of EQs

State Capacity Overtime in Chile

Bayesian Poisson model with year fixed-effects. [Jags Code](#)

Deaths $\sim \text{Poisson}(\lambda_i)$

$$\begin{aligned} \log(\lambda_i) = & \mu + \beta_1 \text{Magnitude}_i + \beta_2 \text{Income Tax}_i + \\ & \beta_3 \text{Magnitude}_i \times \text{Income Tax}_i + \\ & \beta_4 \text{Population}_i + \beta_5 \text{Longitude}_i + \beta_6 \text{Latitude}_i + \\ & \beta_{7,k} \text{Sector}_i + \beta_{8,t} \text{Year}_i \end{aligned} \quad (1)$$

$i_{1,\dots,I}$ and $I = 103$ events;

$k_{1,\dots,K}$ and $K = 3$ sectors;

$t_{1,\dots,T}$ and $T = 64$ years.

Results

Income Taxation Increases State Development Overtime (Chile)

Summary

- **Income taxation** increased *state capacity* overtime in Chile.
- Via spillover effects, the *act* of collecting taxes, improved other state activities (providing public goods and enforcing building codes).

Summary

- **Income taxation** increased *state capacity* overtime in Chile.
- Via spillover effects, the *act* of collecting taxes, improved other state activities (providing public goods and enforcing building codes).

Why care?

1. A **novel earthquake dataset** was used to measure state capacity overtime.

Summary

- **Income taxation** increased *state capacity* overtime in Chile.
- Via spillover effects, the *act* of collecting taxes, improved other state activities (providing public goods and enforcing building codes).

Why care?

1. A **novel earthquake dataset** was used to measure state capacity overtime. Under reasonable assumptions, the capacity of a state to enforce building codes, is a reflection of its overall state capacity.

Summary

- **Income taxation** increased *state capacity* overtime in Chile.
- Via spillover effects, the *act* of collecting taxes, improved other state activities (providing public goods and enforcing building codes).

Why care?

1. A **novel earthquake dataset** was used to measure state capacity overtime. Under reasonable assumptions, the capacity of a state to enforce building codes, is a reflection of its overall state capacity.
2. *Unlike other theories, my paper stressed the **domestic factors** at play (*sectoral contestation*), relaxing the international conflict—*Tillian*—hypothesis.*

Why Not *Indirect* Taxation

Indirect taxes (like import taxes) require less **state efforts** to capture revenue.

Staffing an office, waiting for the ships to come in and **count** the goods. **Sacks of wheat**, for ex.

Talcahuano Port, Chile 19th Century.

Sectoral Competition and Taxation?

Agricultural production, as it needs mostly land, it does not rely on capital as much as the industrial sector does. Moreover, they oppose taxation because their main asset (land) is fixed, hence landowners not being able to move their asset, resist taxation. On the contrary, industrial elites rely on public goods that are beneficial for their business (railroads, bridges, etc.). And while industrialists would prefer imposing higher import taxes (NOT the income tax), that increases the price of importing industrial capital (for ex., machines). Consequently, their second best choice is imposing an income tax.

For these reasons, the emergence of the industrial sector (which implies higher levels of sectoral/elite contestation) leads to the implementation of the income tax.

Where does industry come from?

p. 20 of dissertation. Industry, as predicted by the dual sector model, came from agriculture:

- After the mining boom, mining elites shifted their focus to what is considered the first *true* industrial work which began under agricultural auspices: the cotton mills: “[t]he first power looms were brought [in Perú, Ecuador, and Venezuela] in the 1840s, 1850s; but in all three they were a failure, some of the early mills in Ecuador being destroyed by an earthquake. It was not until after 1890 that the textile industries of these nations began to operate with reasonable success. Guatemala's first cotton mill was established in 1882, and between that date and 1910 a few mills appeared in Chile, Argentina, Uruguay, and Colombia.”
- The first industries were called *obreros* and beyond textiles, early industrialists processed other agricultural goods. For example, animal grease and tallow, dried and cured meats, flour, bread, beer, wines and spirits, being most of them for domestic consumption. Sugar was used in the production of chocolate, candies and biscuits.
- The industrial sector was boosted by favorable international conditions, many times stimulating a positive complementarity between the two sectors. Industrial activities started very small, progressing “from the shop to the factory during the latter half of the nineteenth century.”
- Importantly, modern industrialization did *not* begin with ISI, but around 1900. Others find that the “fact that manufacturing was alive and thriving in Latin America before the 1929 crash is now beyond question.” And that the “development of large-scale, mechanized (and even “heavy”) industry can be dated back to the 1890s.” By the 1870's the carriage industry was on a firm basis.

But Where Does Industrialization Come From?!

The theory puts heavy emphasis on the role of industrialization on state development. However, *Where does industrialization come from?*

Haber 2005 explains that:

"The impetus for industrial development came from the expansion of foreign trade. Driving the growth of foreign trade were two factors. The first was that most Latin American countries were on the silver standard, and silver fell in value relative to gold in the last two decades of the nineteenth century. Most Latin American countries therefore saw their currencies depreciate in real terms relative to the gold-backed currencies of the economies of the North Atlantic. As international trade theory would predict, real exchange rate depreciation resulted in the expansion of the tradables (e.g. industrial goods) [...] Second, the late nineteenth century also saw a dramatic decline in the international costs of transport, as steel-hulled steamships came to replace wood and sail."

From Conflict to Cooperation

Why do lower levels of **sectoral inequality** (which implied **higher military threats**) lead to **sectoral cooperation**?

The rising of the industrial sector allowed industrial political elites to get access to military capacities that were as good as the agricultural elite's. The **threat** is what leads to **cooperation** rather than **conflict**. It makes no sense to engage in conflict when (1) both groups have the same 'fire power' and (2) when there is a cheaper exit (sectoral bargains).

War was in 1891, but Income Tax in 1924?

- Civil wars of 1851-859 and 1891 between a “large landed property [elite against a] productive capital [elite].”
- President **Balmaceda’s overthrowing in 1891** explains the sectoral nature of these conflicts.
- He was mainly supported by the landed elites, but later overthrown in 1891 by a mainly industrial/mining coalition:
 - His agenda on “industrial” infrastructure benefited mostly agricultural areas.
 - his attitude towards the banking sector (closely linked to the mining sector) confiscatory.
- At the same time, however, he failed to secure a coalition with his own sector.
 - Decline of wheat exports. Balmaceda’s policies fostered sectoral dependence of agriculture on industrial production, forcing the “landed proprietors [to] become dependent to a considerable extent on the continuing prosperity of the major nitrate capitalists.” (Zeitlin).
 - While it would be inaccurate to say that Balmaceda was *completely* supported by agriculturalists and *completely* opposed by industrialists, this example illustrates how (failed) inter-sectoral alliances and biased public goods provision against industrialists led these two groups to a military conflict in 1891.
 - The conflict left a permanent scar in the Chilean society. While the civil war lasted only nine months, it took 10,000 lives (out of a total population of 3 million people) and cost more than \$ 100 million,a significant amount for a small country.
 - There was an intention to avoid more violence. For instance, while all “ministers, counselors of state, members of the constituent congress [,] municipal officials, provincial governors and intendants, members of the judiciary and even the lowest functionaries and ordinary employees of Balmaceda’s government were investigated [or] brought to trial,” there were a number of amnesties issued. Similarly, there were a number of *aborted* coups in 1907, 1912, 1915 and 1919. I identify a third additional factor. War was more likely to exhaust all existent assets without producing positive outcomes for either sector, putting pressures for a sectoral compromise.

Standard convergence diagnostics suggest good mixing and convergence.

Year fixed effects were omitted in the table.

A total of 4 chains were run. Detailed diagnostic plots available [here](#).

For example, the historian Barros (1970) explains that before the civil war, *salitreras* (nitrate towns) in northern Chile were locally so important that they were considered “a state within the state.” **Local bosses had to approve decisions on whether public employees could be fired, whether public works could be developed, and on whether politicians could give public speeches.** Moreover, **they coined their own currency** and had their own particular **local laws**.

Early and Late Income-Tax Implementers
